

PROJECT 'HAPPINESS'

Analysis by Vanda & Guiomar

INTRODUCTION

The World Happiness Report ranks 156 countries based on citizens' self-perceived happiness.

**GDP PER
CAPITA**

**HEALTHY LIFE
EXPECTANCY**

**SOCIAL
SUPPORT**

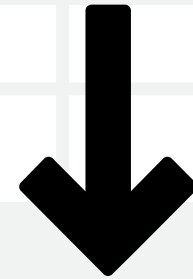

FREEDOM

GENEROSITY

**CORRUPTION
PERCEPTION**

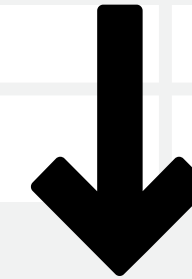

PART 1

```
graph TD; A[PART 1] --> B[HYPOTHESIS]; A --> C[FINDING]; B --- D[Perception of corruption is less significant to bring happiness to the country.]; C --- E[Countries with lower corruption perception tend to have higher overall happiness scores. Europeans perceive less corruption than Africans];
```

HYPOTHESIS

Perception of corruption is less significant to bring happiness to the country.

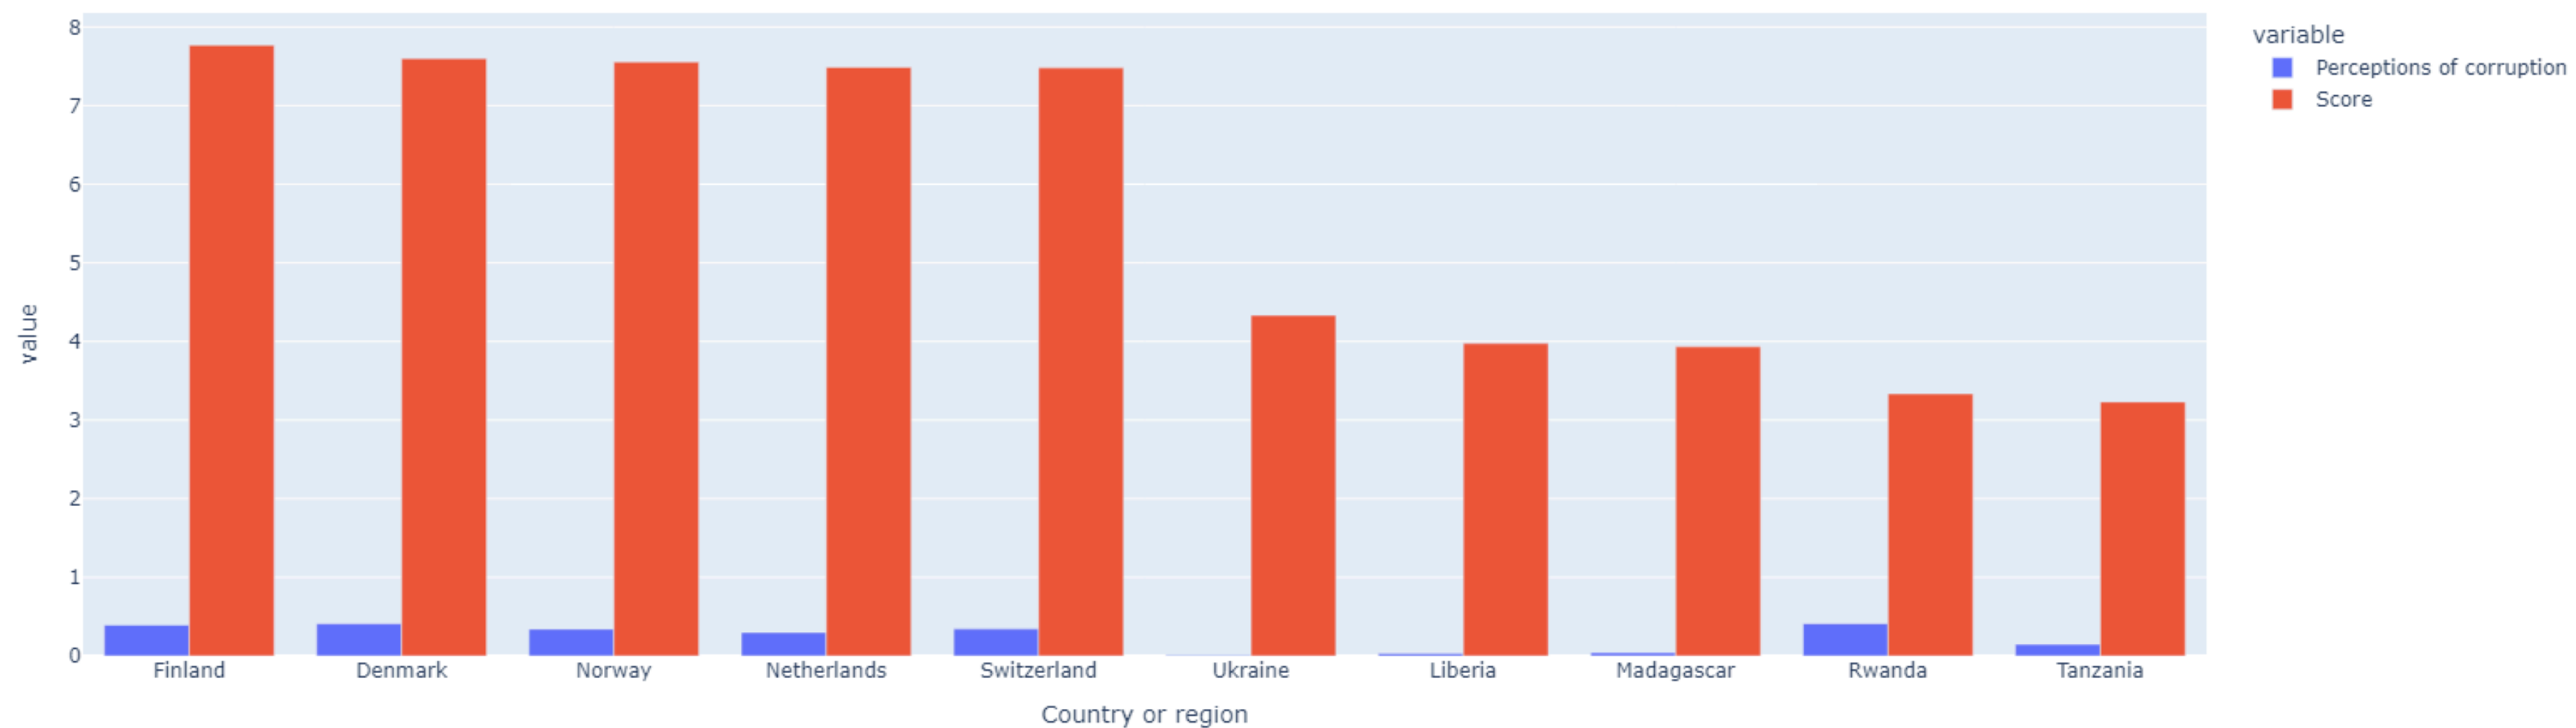

FINDING

Countries with lower corruption perception tend to have higher overall happiness scores. Europeans perceive less corruption than Africans

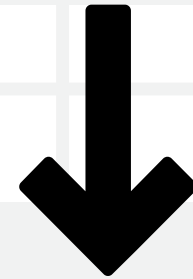

PART 1

Country perceptions on corruption 2019

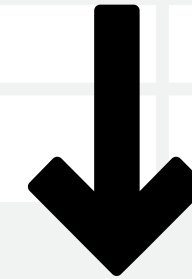

PART 2

```
graph TD; A[PART 2] --> B[HYPOTHESIS]; A --> C[FINDING]; B --- D[All countries perceive themselves as generous equally.]; C --- E[Countries do not perceive themselves as equally generous, with none scoring above 0.5.];
```

HYPOTHESIS

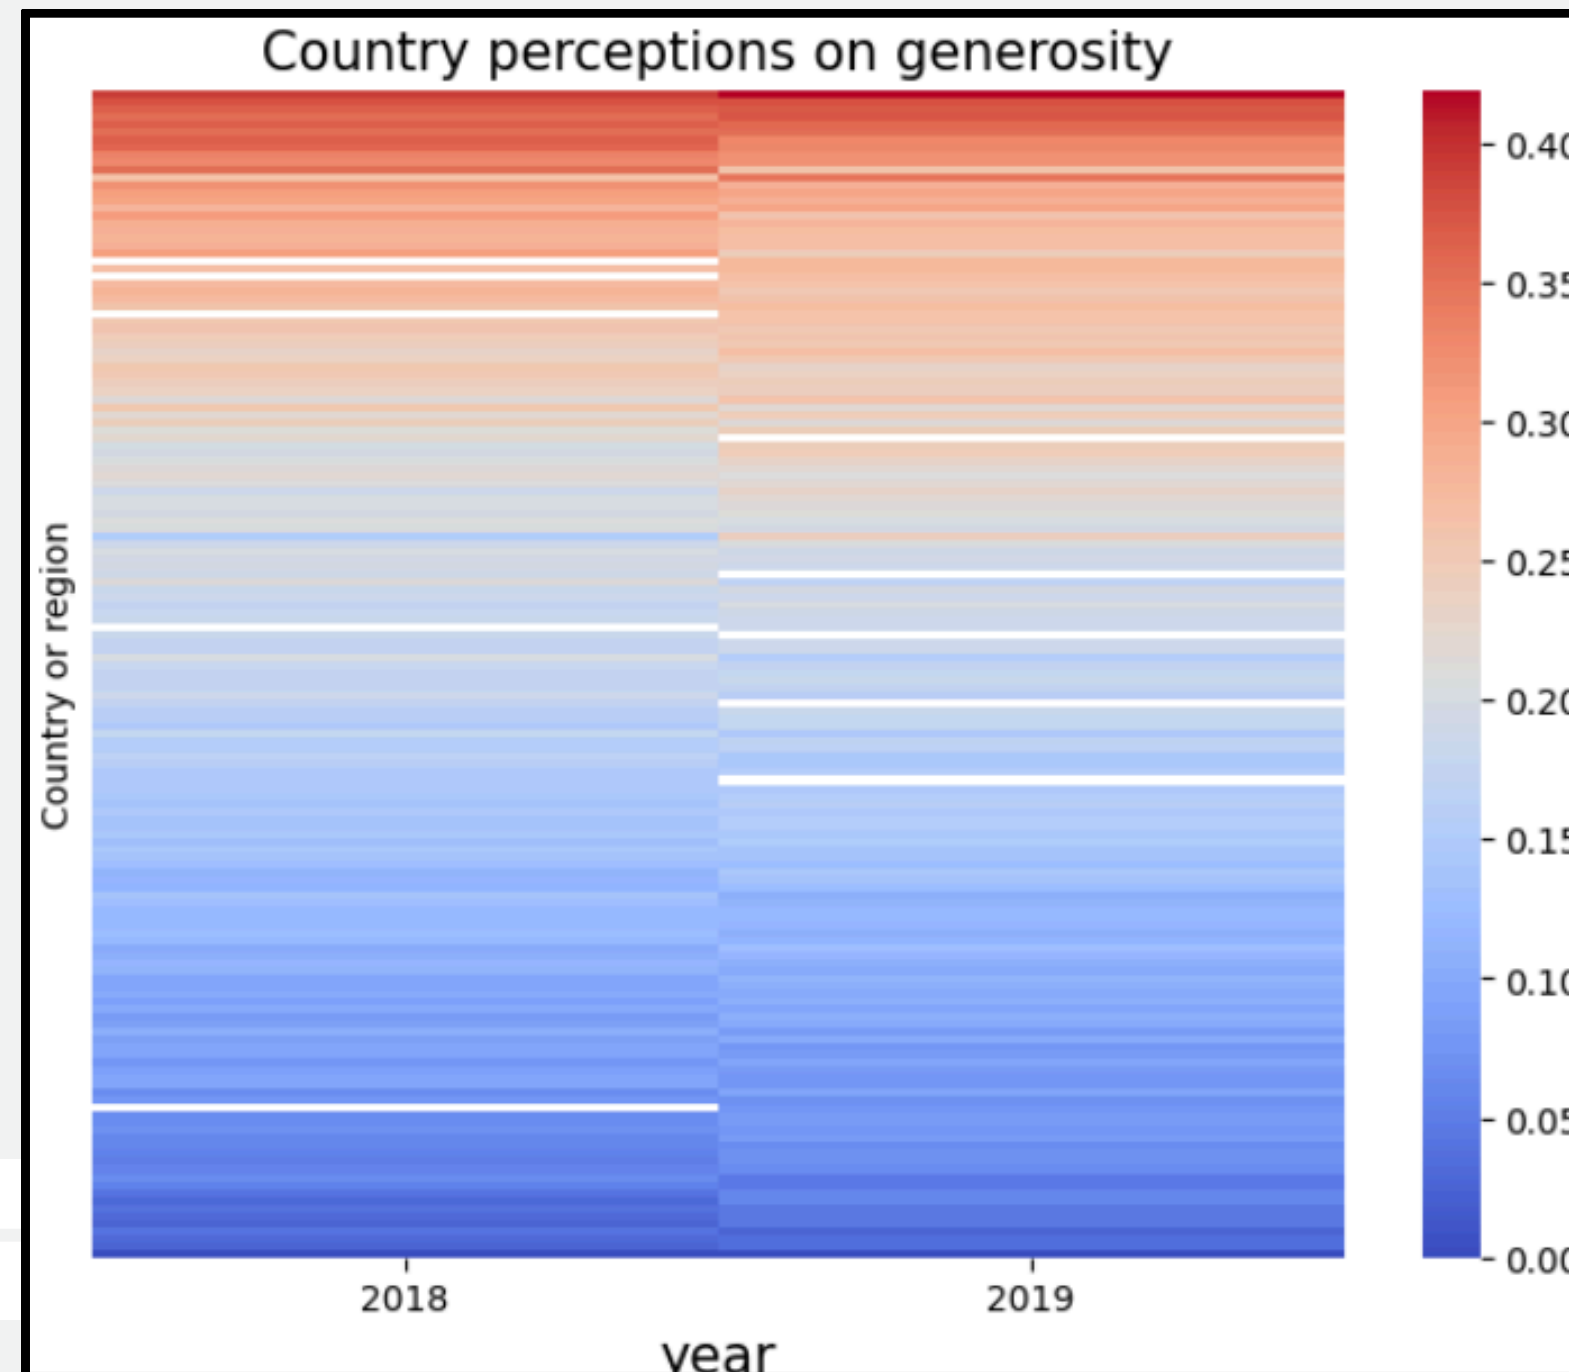

All countries perceive themselves as generous equally.

FINDING

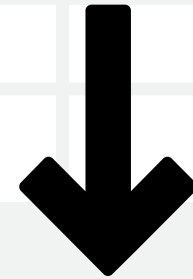

Countries do not perceive themselves as equally generous, with none scoring above 0.5.

PART 2

PART 3

```
graph TD; A[PART 3] --> B[HYPOTHESIS]; A --> C[FINDING]; B --> D["Social support is the most important index of all."]; C --> E["Social support appears to be the most significant criterion among all."];
```

HYPOTHESIS

Social support is the most important index of all.

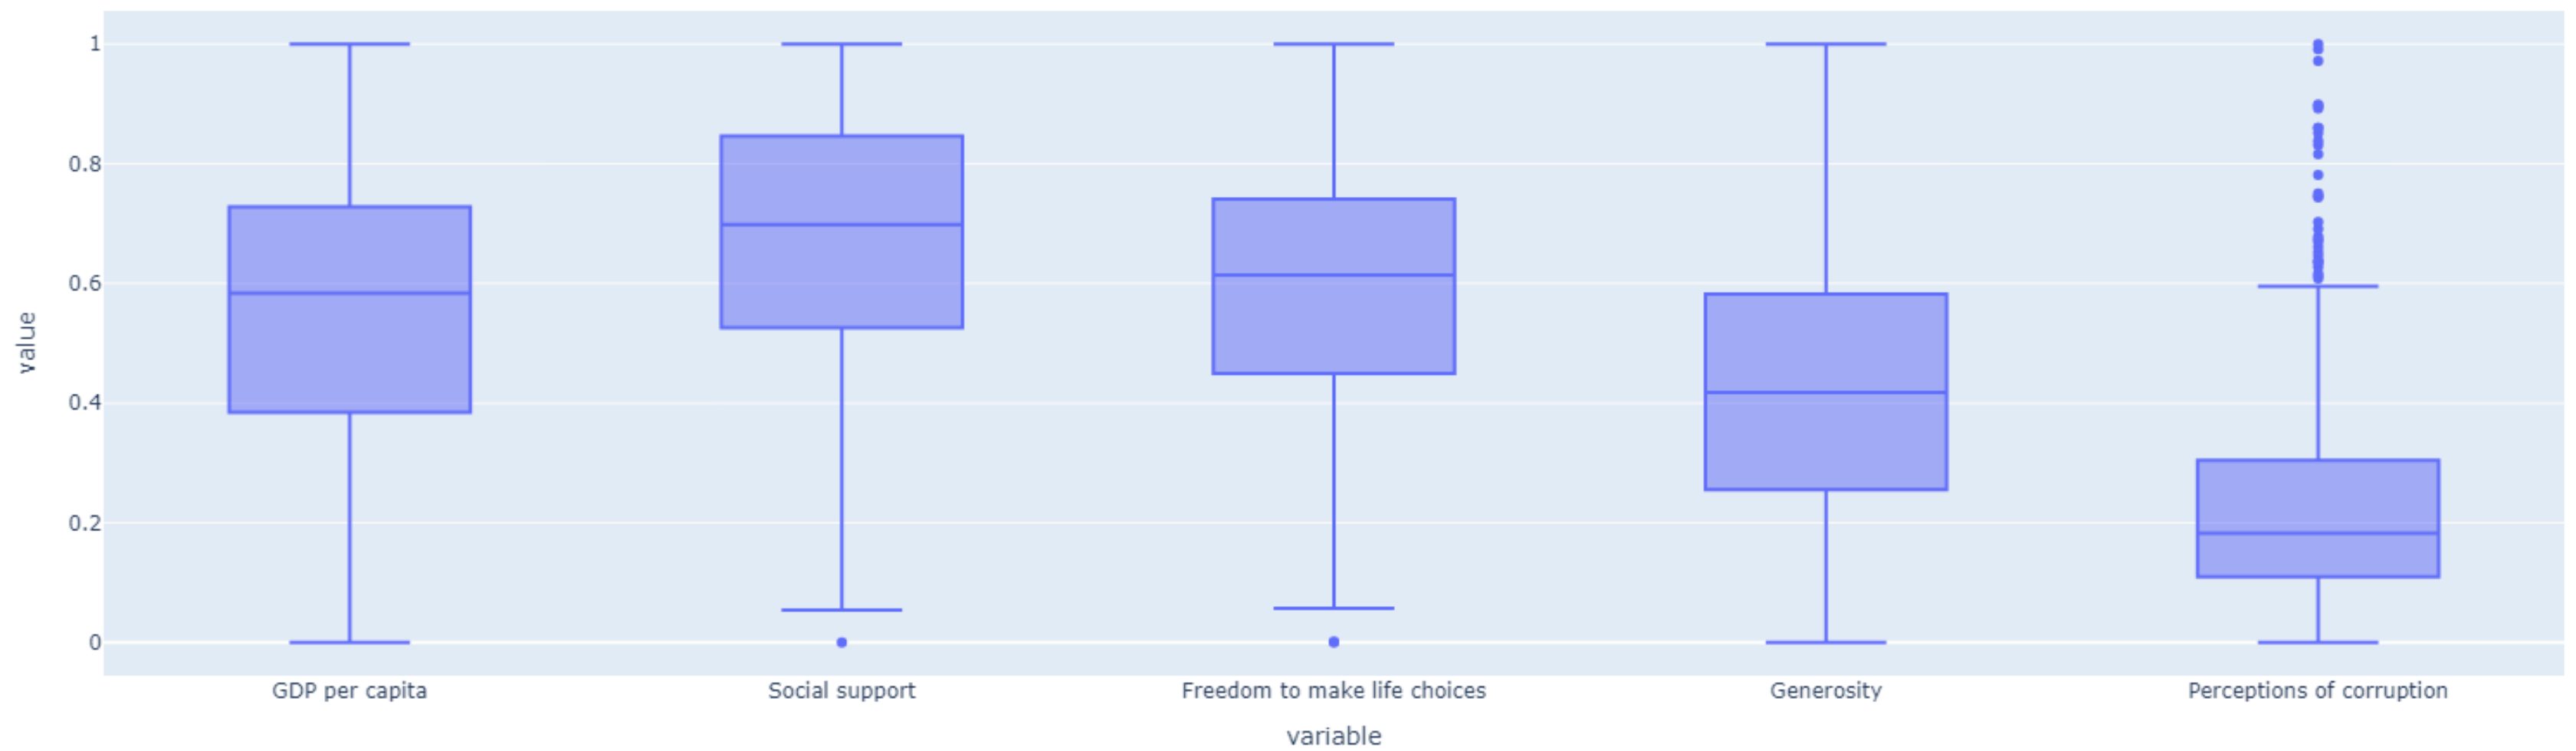

FINDING

Social support appears to be the most significant criterion among all.

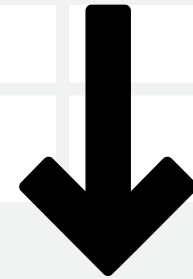

PART 3

Relevance of different criteria within the same scale

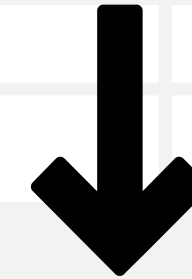

PART 4

```
graph TD; A[PART 4] --> B[HYPOTHESIS]; A --> C[FINDING];
```

HYPOTHESIS

Asian countries and African countries have similar rate of freedom to make life choices.

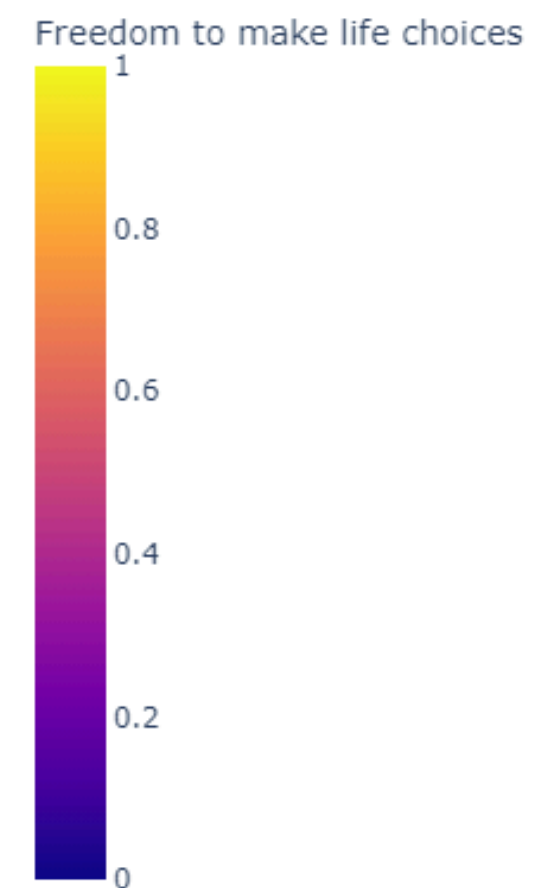

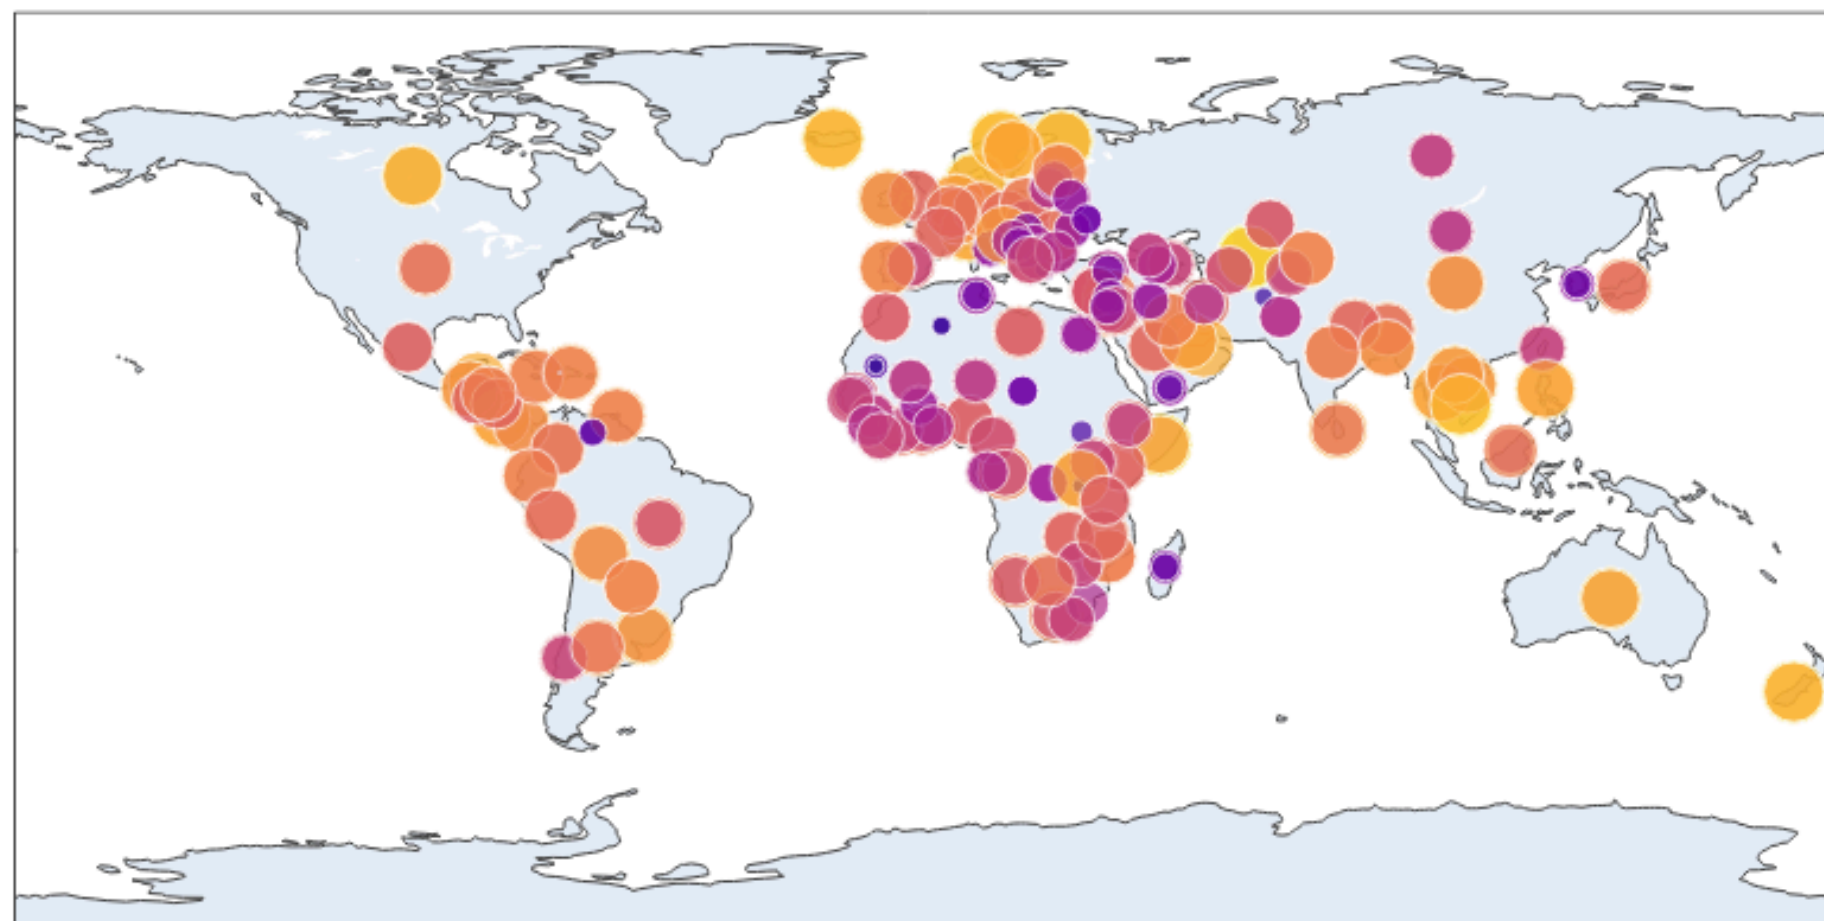

FINDING

Overall, Asian countries experience greater freedom of choice than African countries.

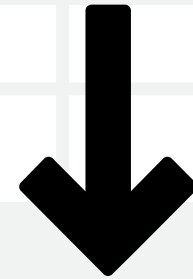

PART 4

Freedom to make life choices in the world

PART 5

```
graph TD; A[PART 5] --> B[HYPOTHESIS]; A --> C[FINDING]; B --> D["Social support and sense of freedom are correlated."]; C --> E["Social support and freedom have a low correlation of 0.4"];
```

HYPOTHESIS

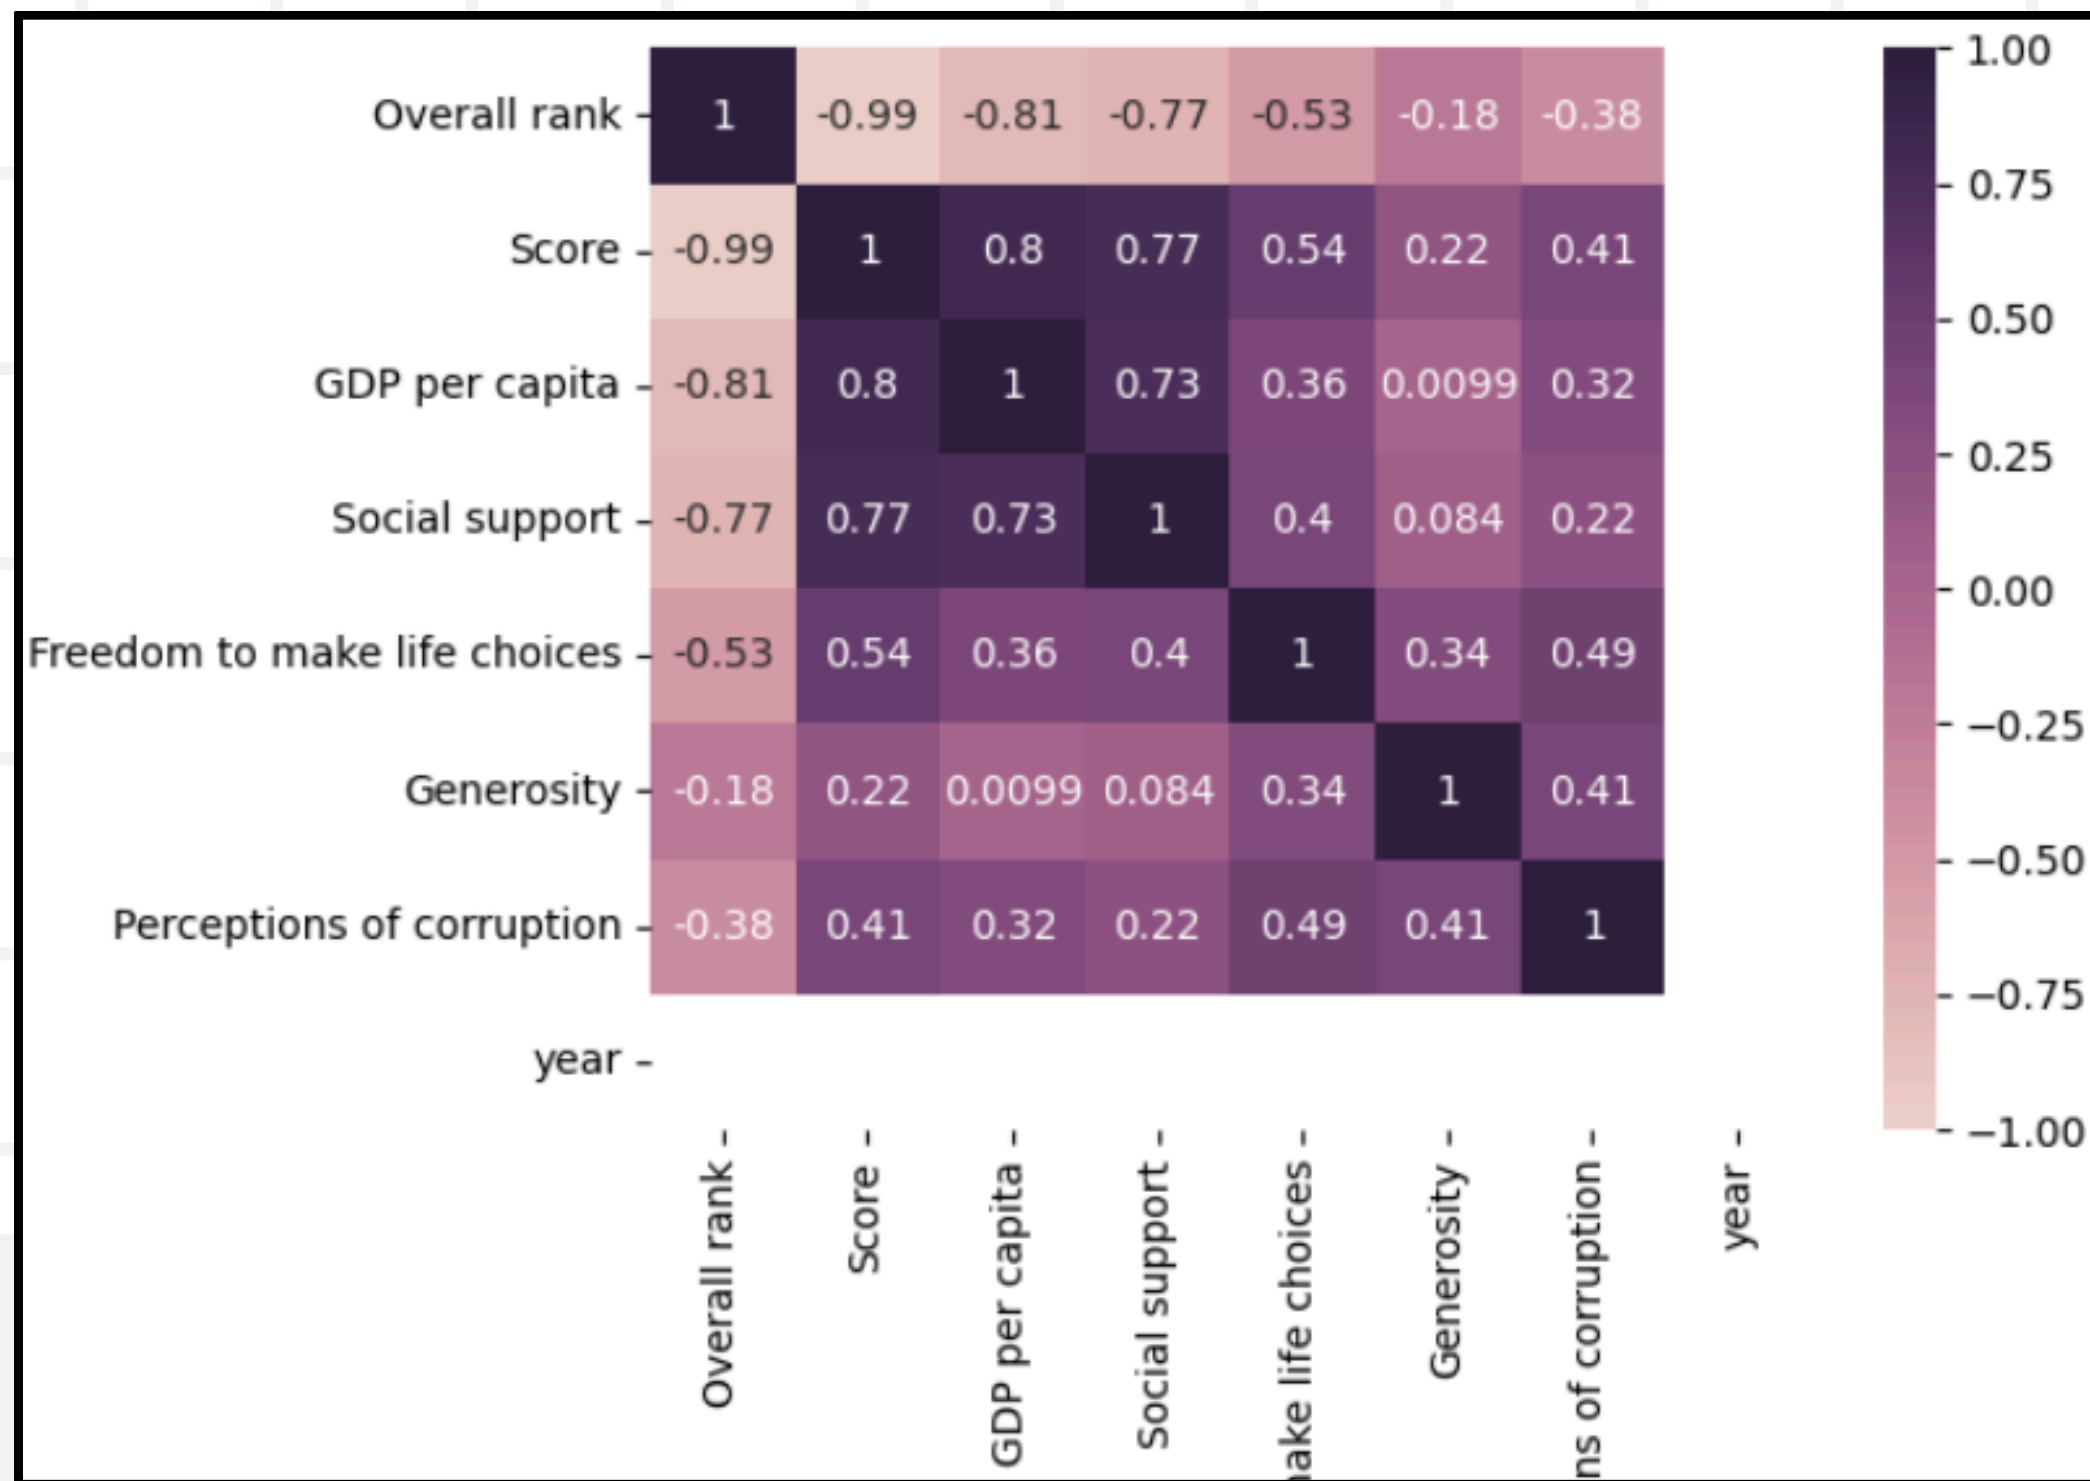

Social support and sense of freedom are correlated.

FINDING

Social support and freedom have a low correlation of 0.4
